Maintain Coupon Parameters

Coupon Code: 20OFF ?? Description * 20 % OFF

Tran/Item/Class* T Receipt Text* 20 % OFF

Redemption Value* 20.00 %/\$* % Min Purchase Amt* 10.00

Mfgr or Store Coupon* S Start Date* 07/11/19

Max # same coupon* 100 Ending Date* 10/03/20

Factor* 1

Valid with other coupons?* Y Apply to all qtys/same item? (Y/N)*

Markdown or Discount* D Max # Items this coupon can Redeem*

Identify any specific SKUs or Classes that are valid for this coupon:

##	Specific SKUs	Description	##	Beg. Class	End Class
1	100	??	900	??	??
2	??	??	??	??	??
		??		??	??
		??		??	??
		??		??	??
		??		??	??
		??		??	??

- You can add a new Coupon Code by either typing in and Select the “Add” or “Copy” Option. You can also modify any previous coupon. You can also use the standard period “.” for the next numeric sequence number. **If you modify coupons after a Web Order has been placed the modified coupon will not be applied to any suspended transactions only to new Orders.*
- You will need to fill-in all of the required fields. For detailed field information input a single question mark for more help.
- Selecting the “Tran/Item/Class” type of discount will determine your choices throughout the setup.
 T=Tran type discounts will apply the discount to the whole order.
 I=Item type discounts will apply the discounts to the “Specific SKUs” you list for the discount.
 C=Class type discounts will use the table defined in the “Beg. Class – End Class”. **note if you are adding*

groupings of class codes you will need to make sure they are in sequential order, example: 100-200 600-700.

The CA option behaves the same as C but the discount will apply to all items in the defined class instead of just the first item added to the transaction.

- Choosing either the Mfgr or Store Coupon will make a difference on if the coupon is treated as a discount or as a tender amount.
 - A Manufacturer coupon will be treated as a TENDER amount and is normally issued by the manufacturer. As such it will decrease the balance due and will report as a tender amount.
 - A store coupon is issued by the store, maybe as a promotion to get people to shop at the store, and will be treated as a normal discount. These items will be treated as taxable, in other words, tax will be charged on the original retail amount before applying the coupon. The discount will be reported as any other discount.
- Min Purchase Amt* – The way this field is applied depends on the coupon type (Tran/Item/Class) you set up.
 - Transaction – The transaction Subtotal amount must meet the minimum, once the subtotal meets the minimum then the coupon will apply the coupon amount.
 - Item – The line item amount must meet the minimum before the discount will be applied. If the item sells for 10.00 and the minimum is 30.00 then the item will not apply unless the quantity is more than 3 to meet the 30.00 minimum. The coupon will only be applied 1 time regardless of how many items meet the minimum.
 - Class – The class must meet the minimum, the coupon will only be applied to the first item of the class. The total is not cumulative.
 - Class All – When the minimum is met by a cumulative of all the classes in the coupon then

the discount will be applied to the total amount for the valid classes or the dollar amount will be applied 1 time.

Applying Coupon(s) Promo(s)

During the Checkout process the online user will have the option to enter the Promo/Coupon Code that was setup. Users can add additional Codes using the instructions listed online.

example

The screenshot shows the TCS Demo Store POS interface. At the top, it displays 'Sales Clerk: TCS SUPPORT', 'Tran Type: MO', and 'Mail Order Sale'. The 'Balance' is shown as 11.00. Below this is a table with columns: ##, Qty/SKU/Mod, Description, Qty, Price, and Extended. The table lists two items: 1 3863 A.M. ARCHED LOGO T-SHIRT (Price 11.00, Extended 11.00) and 2 8206 SHIPPING & HANDLING (Price 0.00, Extended 0.00). A pop-up window titled 'TCS DEMO STORE' is open, asking to 'Enter the Voucher number' with the value '10001776' entered. Below the pop-up, there is a table for 'Transaction Modifiers' with columns: #, Modifier or Tender, and Amount. It shows '1 GC' with an amount of 0.00. At the bottom, there are buttons for CASH, EXIT, CHECK, GIFT CARD, ABORT, GO BACK, CREDIT CARD, DEBIT CARD, ONE CARD, and TRAN DISC. The 'Total' is displayed as 11.00.

- You will need to print the order Pick Slip or the email confirmation to see the type of Voucher, Gift Certificate or Card that your customer used at checkout.
- To enter a Promo/Coupon code, after selecting TOTAL, you need to select the 'coupon' key or int the 'Modifier or Tender' field enter CPN and press enter. You will then enter the promo/coupon code in the pop up box.
- You can utilize the TCS standard types of Tender Codes and their rules e.g. Splitting Tenders between the Voucher, Gift Certificate or Card and other valid Tenders for web checkout.

**note you must be running webstore version 3.x.x or greater for these features to be available.*
