Rental Customer Information Lookup

Rental Customer Information Lookup

When you look up a customer for rental or for rental drop off you will see some additional information on the search display screen.

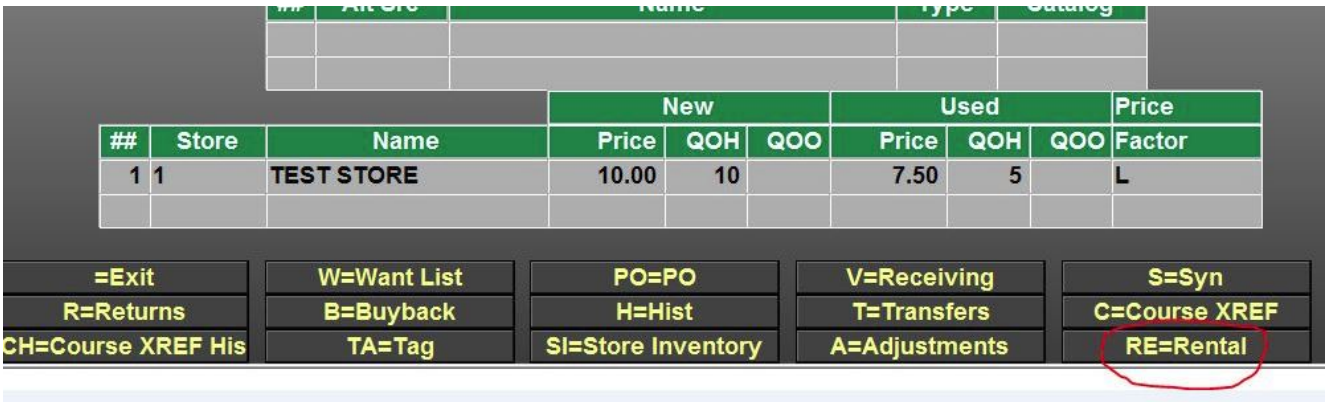

1. If a customer record has ever had a rental, then a 'Y' will appear under the "Rnt" column
2. If the customer currently has a rental that has not yet been returned, then a "*Y" will show, again, this is to indicate that the customer record currently has an outstanding rental

---

Link to Rental Screen from TX – MI

Added a RE=Rental to the MI screen in TX. This option will only display if there is an associated rental master record. When you view the RE=Rental screen it is passing the "Inquiry"

through so you are still in Inquiry mode and will not be able to edit any information in the Rental Master record.

Rental Setup and Training

Setup and training for the TCS rental product.
